BPC-157/TB-500 COMBINATION INFORMATION DOCUMENT

WHAT IS BPC-157/TB-500, ANYWAY?

BPC-157/TB-500 is a powerful synergistic combination of two regenerative peptides delivered together in a convenient prefilled cartridge pen. BPC-157 (Body Protection Compound-157) is a 15-amino-acid peptide derived from a protective protein found in human gastric juice, renowned for accelerating tissue repair and reducing inflammation. TB-500 (Thymosin Beta-4) is a 43-amino-acid peptide naturally produced by the thymus gland that promotes cell migration, angiogenesis, and structural healing. Together, they create a comprehensive recovery protocol administered subcutaneously once daily (250mcg of each peptide) for 20 doses. This combination is ideal for tendon/ligament injuries (Achilles, rotator cuff, tennis elbow), muscle strains or tears, joint pain and arthritis, post-surgical recovery, gastrointestinal issues (IBS, leaky gut), and chronic inflammation. Athletes and active individuals report 40-60% faster healing times, significant pain reduction, improved mobility, and the ability to return to training or daily activities with confidence and without prolonged downtime.

INTRODUCING BPC-157/TB-500 AT mobivive

Accelerate your body's natural healing with the BPC-157/TB-500 combination—your complete recovery solution in one convenient pen! mobivive pairs this therapy with targeted Recovery IVs to optimize tissue repair and get you back to peak performance faster.

THE SCIENCE

BPC-157 activates VEGF (vascular endothelial growth factor) to promote new blood vessel formation, boosts fibroblast activity for collagen production, and modulates nitric oxide to reduce inflammation—protecting tissues even against NSAID damage. TB-500 regulates actin polymerization for cell structure and movement, promoting flexible, scarless healing while dampening inflammatory cytokines. Studies show this combination can reduce tendon healing time by up to 50%, improve muscle repair rates, protect gut lining integrity, and support comprehensive soft tissue regeneration without the risks associated with corticosteroids.

THE BPC-157/TB-500 PROCESS AT mobivive

1. Complete your medical questionnaire

Fill in the medical questionnaire. If you answer **"No" to all questions**, your **BPC-157/TB-500 order is placed**.

If you answer **"Yes" to any question**, a **once-off consultation (R500)** is required before processing.

2. Order and delivery

Your BPC-157/TB-500 arrives as a **prefilled cartridge pen**, no vials, no mixing. Instructions included.

3. Daily injection routine

Self-administer daily: remove cap, dial your prescribed dose (typically 250mcg of each peptide, 15 units), and inject subcutaneously into your lower abdomen, front of thigh, or for targeted healing within a few inches of the injury site (not directly into the tendon or joint). Press pen at 45-90° angle and hold for the click. Rotate injection sites daily.

KEY REMINDERS

- Inject once daily, ideally at the same time each day for consistency
- Can be administered any time, with or without food
- For injury recovery, injecting near (but not into) the affected area may enhance local healing
- Pairs excellently with rest, physical therapy, and anti-inflammatory nutrition
- Store prefilled cartridge pen in the refrigerator between uses
- Most clients see noticeable improvement within 7-14 days
- **All mobivive peptides are prefilled cartridge pens—no vials, no needles**

HOW MUCH DOES IT COST

BPC-157/TB-500 Combination Prefilled Cartridge Pen: R2,099

(Includes 20-dose supply + medical questionnaire review; R500 consultation fee applies if questionnaire triggers doctor review)

THE BPC-157/TB-500 RECOVERY PROGRAM

This comprehensive program pairs your daily BPC-157/TB-500 cartridge therapy with weekly Arthritis Recovery IV treatments (vitamins, minerals, amino acids for joint and tissue support). Together, they break inflammation cycles, accelerate collagen remodeling, sustain energy for rehabilitation exercises, and provide complete nutritional support for optimal healing. Ideal for athletes, weekend warriors, or anyone dealing with chronic pain or injury. Expect 30-50% symptom reduction by

program completion, with weekly mobility and pain assessments to track your progress.

LET'S TALK SIDE EFFECTS

BPC-157/TB-500 combination therapy is exceptionally well-tolerated. Mild injection site redness or slight itching may occur and typically resolves within hours. Some clients report improved gut comfort and reduced bloating as an added benefit. No significant systemic side effects have been reported in clinical use.
