BPC-157 (STANDALONE) INFORMATION DOCUMENT

WHAT IS BPC-157, ANYWAY?

BPC-157 (Body Protection Compound-157) is a synthetic 15-amino-acid peptide derived from a protective protein naturally found in human gastric juice, making it highly stable and effective throughout the body. Originally researched for its remarkable ability to heal gastric ulcers, BPC-157 has become a cornerstone therapy for musculoskeletal injuries, tissue repair, and gut health. Delivered via convenient prefilled cartridge pens in daily doses of 300mcg subcutaneously, it's available in two strengths: 6mg total (20 doses) or 10mg total (33 doses). BPC-157 accelerates recovery from tendon and ligament injuries (Achilles tendinitis, rotator cuff tears, tennis elbow), muscle strains, arthritis and joint pain, gastrointestinal disorders (IBS, leaky gut, ulcerative colitis), post-surgical wounds, and even protects against NSAID-induced gut damage. Athletes and active individuals choose BPC-157 for 30-50% faster mobility restoration, significant pain relief without steroids, improved tissue strength and flexibility, and the confidence to return to training, work, or daily life without prolonged downtime.

INTRODUCING BPC-157 AT mobivive

Unlock your body's natural healing potential with BPC-157—the research-backed recovery peptide now available in easy-to-use prefilled cartridge pens! mobivive integrates BPC-157 with targeted Recovery and Wellness IVs to optimize your repair processes and minimize downtime.

THE SCIENCE

BPC-157 works through multiple powerful mechanisms: it activates VEGF (vascular endothelial growth factor) for new blood vessel growth (angiogenesis), boosts fibroblast activity to produce collagen and repair connective tissue, modulates nitric oxide pathways to reduce inflammation and protect against oxidative damage, and enhances the gut-brain axis for systemic healing. Research demonstrates that BPC-157 can heal Achilles tendon injuries in 50% less time, protect and repair gastric lining damage from NSAIDs or stress, reverse corticosteroid-induced tissue weakening, and improve joint flexibility and strength.

Company Name: Mobivive PTY LTD

Comp Registration: 2021 /454217 / 07

VAT Number: 4340304361

Address: Shop 5A, 1st Floor, The Promenade, 87 Victoria Road, Camps Bay 8005

THE BPC-157 PROCESS AT mobivive

1. Complete your medical questionnaire

Fill in the questionnaire. If you answer **"No" to all questions**, your **BPC-157 order is placed**.

If you answer **"Yes" to any question**, a **once-off consultation (R500)** is required.

2. Order and delivery

Your BPC-157 arrives as a **prefilled cartridge pen**—no vials, no mixing.

3. Daily injection routine

Self-administer once daily: remove cap, dial your prescribed dose (300mcg), clean injection site, and inject subcutaneously at a 45-90° angle into your lower abdomen, front of thigh, or for targeted injury healing within a few inches of the affected area (not directly into tendon or joint). Rotate sites daily.

KEY REMINDERS

- Inject once daily at a consistent time (morning or evening—your choice)
- Can be administered with or without food, no timing restrictions
- For injury recovery, many clients benefit from injecting near (but not into) the injury site
- Store prefilled cartridge pen in refrigerator
- Most clients notice improved pain and mobility within 7-14 days
- **All mobivive peptides are prefilled cartridge pens, no vials, no needles**

HOW MUCH DOES IT COST

BPC-157 Prefilled Cartridge Pen (6mg total): R1,250 (20-dose supply)

BPC-157 Prefilled Cartridge Pen (10mg total): R1,550 (33-dose supply)

(Includes medical questionnaire review; R500 consultation fee applies if questionnaire triggers doctor review)

THE BPC-157 RECOVERY PROGRAM

This 4-week program pairs your daily BPC-157 therapy with 4 weekly Arthritis Recovery or Wellness IV treatments (vitamins, minerals, amino acids for comprehensive joint and tissue support). Together, they break persistent inflammation cycles, accelerate tendon and ligament remodeling, support gut lining repair, and sustain energy levels for rehabilitation exercises.

LET'S TALK SIDE EFFECTS

BPC-157 is remarkably well-tolerated with an excellent safety profile. Mild injection site redness or slight itching may occur and typically resolves within hours. Some clients report improved digestive comfort as an unexpected bonus benefit.
