## IPAMORELIN INFORMATION DOCUMENT

### WHAT IS IPAMORELIN, ANYWAY?

Ipamorelin is a highly selective growth hormone secretagogue peptide that gently stimulates your pituitary gland to release natural growth hormone in healthy pulses without affecting cortisol or prolactin levels like older peptides. Delivered via convenient prefilled cartridge pens in 200mcg daily doses administered subcutaneously (typically before bed), each cartridge provides 4mg total (20 doses) for nearly three weeks of therapy. Unlike synthetic growth hormone replacement, Ipamorelin works with your body's natural rhythms to boost endogenous GH production by 2-5x, supporting muscle recovery and growth, body composition improvement (increased lean mass, reduced body fat), deep restorative sleep quality, accelerated injury healing and tissue repair, anti-aging and skin elasticity, and enhanced exercise performance and endurance.

### INTRODUCING IPAMORELIN AT mobivive

Optimize your natural growth hormone production with Ipamorelin, the safe, effective peptide for recovery, body composition, and anti-aging! mobivive pairs Ipamorelin therapy with targeted Wellness and Recovery IVs to maximize your body's regenerative potential and help you achieve peak performance and vitality.

### THE SCIENCE

Ipamorelin is a selective agonist of the ghrelin/growth hormone secretagogue receptor, triggering your pituitary to release natural growth hormone in physiological pulses that mimic youthful patterns. Unlike older GHRPs (growth hormone-releasing peptides), Ipamorelin has minimal effect on cortisol (stress hormone) and prolactin, providing a "cleaner" side-effect profile with targeted benefits.

### THE IPAMORELIN PROCESS AT mobivive

### 3. Daily evening routine

Self-administer once daily, ideally 30-60 minutes before bedtime on an empty stomach: remove cap, dial your prescribed dose (200mcg), clean injection site, and inject subcutaneously at a 45-90° angle into your lower abdomen, front of thigh, or upper arm. Rotate sites each evening.

## KEY REMINDERS

- Inject once daily, ideally 30-60 minutes before bedtime for optimal GH pulse timing
- Take on an empty stomach (at least 2 hours after last meal)
- Rotate between abdomen, thighs, and upper arms each evening
- Consistent sleep schedule enhances benefits
- Store prefilled cartridge pen in refrigerator
- Most clients notice improved sleep quality within 3-7 days
- **All mobivive peptides are prefilled cartridge pens, no vials, no needles**

## HOW MUCH DOES IT COST

### Ipamorelin Prefilled Cartridge Pen: R1,250

(20-dose supply (nearly 3 weeks) + medical questionnaire review; R500 consultation fee applies if questionnaire triggers doctor review)

## THE IPAMORELIN RECOVERY & BODY COMPOSITION PROGRAM

This comprehensive 8-week program pairs your nightly Ipamorelin therapy with 8 weekly Wellness or Recovery IV treatments (amino acids, B-complex, minerals) to create powerful synergy for muscle growth, fat loss, and regeneration.

## LET'S TALK SIDE EFFECTS

Ipamorelin has an excellent safety profile and is generally very well-tolerated. Some clients may experience mild injection site redness that resolves quickly, transient increased hunger 20-30 minutes after injection (due to ghrelin receptor activation—normal and temporary), or mild water retention in the first week as tissues adapt.
