TB-500 (THYMOSIN BETA-4) INFORMATION DOCUMENT

WHAT IS TB-500, ANYWAY?

TB-500 is the synthetic version of Thymosin Beta-4, a naturally occurring 43-amino-acid peptide produced by your thymus gland that plays a crucial role in tissue repair, cell migration, and inflammation control. This powerful regenerative peptide regulates actin polymerization, the fundamental process that allows cells to move, migrate to injury sites, and rebuild damaged structures. Delivered via convenient prefilled cartridge pens in doses of 1.5mg (for faster loading) or 750mcg (for maintenance) administered subcutaneously 2 times per week, TB-500 provides 15mg total per cartridge (10-20 doses depending on protocol). Unlike many recovery peptides that work locally, TB-500 is systemically active, it circulates throughout your entire body to find and repair damaged tissue wherever needed. It excels in healing muscle strains and tears, ligament sprains and chronic instability, post-surgical recovery (ACL reconstruction, rotator cuff repair), chronic tendonitis, flexibility and mobility improvement, and even hair follicle stimulation.

INTRODUCING TB-500 AT mobivIVE

Unlock systemic healing power with TB-500, the peptide that finds and repairs damage throughout your entire body! mobivIVE pairs TB-500 therapy with targeted Immune and Recovery IVs to maximize your body's natural regenerative capacity and get you back to peak performance faster.

THE SCIENCE

TB-500 mimics natural Thymosin Beta-4 to upregulate actin, the protein that forms cellular scaffolding and enables cell migration to injury sites. It promotes robust angiogenesis (new blood vessel formation) to deliver oxygen and nutrients to healing tissues, dampens pro-inflammatory cytokines to reduce swelling and pain, stimulates stem cell differentiation for tissue regeneration, and prevents excessive scar tissue formation for more flexible, functional healing.

THE TB-500 PROCESS AT mobivVe

1. Complete your medical questionnaire

Fill in the questionnaire. If you answer **"No" to all questions**, your **TB-500 order is placed**.

If you answer **"Yes" to any question**, a **once-off consultation (R500)** is required.

2. Order and delivery

Your TB-500 arrives as a **prefilled cartridge pen**—no vials, no mixing.

3. Twice-weekly routine

Self-administer twice weekly (e.g., Monday and Thursday): remove cap, dial your prescribed dose (1.5mg for loading or 750mcg for maintenance), clean injection site, and inject subcutaneously at a 45-90° angle into your lower abdomen, front of thigh, or upper arm. TB-500 works systemically, so injection site location does not need to be near your injury. Rotate sites.

KEY REMINDERS

- Inject twice per week on consistent days (e.g., Monday/Thursday)
- Can be administered any time of day, with or without food
- Injection site does NOT need to be near injury—TB-500 is systemically active
- Rotate between abdomen, thighs, and upper arms
- Store prefilled cartridge pen in refrigerator
- Many clients notice improved flexibility and reduced inflammation within 2-3 weeks
- **All mobivVe peptides are prefilled cartridge pens—no vials, no needles**

HOW MUCH DOES IT COST

TB-500 Prefilled Cartridge Pen: R2,699

(15mg total, 10-20 doses depending on protocol + medical questionnaire review; R500 consultation fee applies if questionnaire triggers doctor review)

THE TB-500 SYSTEMIC RECOVERY PROGRAM

This comprehensive program pairs your twice-weekly TB-500 therapy with weekly Immune Support or Post-Surgical Recovery IV treatments to amplify systemic healing, support immune function, reduce inflammation, and optimize tissue regeneration from the inside out.

LET'S TALK SIDE EFFECTS

TB-500 is generally very well-tolerated with minimal side effects. Some clients may experience mild injection site redness that resolves quickly, transient fatigue as the
