NAD+ PEPTIDE INFORMATION DOCUMENT

WHAT IS NAD+, ANYWAY?

NAD+ (Nicotinamide Adenine Dinucleotide) is a vital coenzyme found in every cell of your body, playing a central role in energy metabolism, DNA repair, and cellular health. As we age, NAD+ levels naturally decline by up to 50% by age 40, leading to fatigue, slower recovery, brain fog, and visible signs of aging. Delivered via convenient prefilled cartridge pens in 50-150mg doses administered subcutaneously twice a week, titrated up over the first weeks, NAD+ therapy restores cellular energy production, supports mitochondrial function, and activates sirtuins, longevity proteins that protect against age-related decline. It's the go-to for chronic fatigue, post-viral recovery (including Long COVID), brain fog, athletic performance optimization, anti-aging protocols, and addiction recovery support. Clients report dramatically improved energy levels within days, enhanced mental clarity, faster workout recovery, better sleep quality, and an overall sense of vitality and resilience that transforms daily life.

INTRODUCING NAD+ AT mobivive

Experience cellular rejuvenation with NAD+, your key to sustained energy and longevity! As a mobile IV therapy & revive lounge, mobivive offers NAD+ therapy in user-friendly prefilled cartridge pens, making it simple to support your body's natural repair processes wherever you are.

THE SCIENCE

NAD+ powers the mitochondria in your cells' energy factories by facilitating the conversion of nutrients into ATP (cellular fuel). It activates sirtuin proteins that regulate DNA repair, reduce inflammation, and slow cellular aging. NAD+ also supports neurotransmitter production for mental clarity and mood stability. Research shows NAD+ therapy can boost energy levels by 30-50%, improve cognitive function, accelerate muscle recovery, and support healthy aging at the cellular level.

THE NAD+ PROCESS AT mobivive

1. Complete your medical questionnaire

Fill in a short medical questionnaire. If you answer **"No" to all questions**, your information is reviewed and **your NAD+ order is placed**.

If you answer **"Yes" to any question**, a **once-off consultation (R500)** with our doctor will be required before processing.

Contact Number: 061-509-6038

Email: info@mobivive.co.za

Web page: www.mobivive.co.za

Company Name: Mobivive PTY LTD

Comp Registration: 2021/454217 / 07

VAT Number: 4340304361

Address: Shop 5A, 1st Floor, The Promenade, 87 Victoria Road, Camps Bay 8005

2. Order and delivery

Your NAD+ arrives as a **prefilled cartridge pen**, no vials or separate needles. Clear instructions and dosing guidance are included.

3. Twice-weekly routine

Self-administer using the prefilled pen: remove the cap, dial your prescribed dose (week 1: 50mg = 20 clicks, week 2: 100mg = 40 clicks, from week 3: 100-150mg = 40-60 clicks; 1 click = 2.5mg), press the pen firmly against cleaned skin on your lower abdomen, front of thigh, or upper arm at a 45-90° angle, and hold for the click. Inject twice a week as prescribed. Rotate injection sites with each dose.

KEY REMINDERS

- Inject twice a week on consistent days (e.g., Monday/Thursday)
- Can be administered any time of day, with or without food
- Rotate injection sites between abdomen, thighs, and upper arms
- Store prefilled cartridge pen in the refrigerator
- Start tracking energy, sleep quality, and recovery within the first week
- **All mobivive peptides are prefilled cartridge pens—no vials, no needles**

HOW MUCH DOES IT COST

NAD+ Prefilled Cartridge Pen: R1,399

(Includes 3 weeks supply at maximum dosage + medical questionnaire review; R500 consultation fee applies if questionnaire triggers doctor review)

THE NAD+ CELLULAR ENERGY PROGRAM

Pair your NAD+ therapy with our Energy IV treatments for maximum mitochondrial support. This comprehensive program combines the prefilled cartridge convenience of NAD+ with targeted IV nutrients (B-complex, amino acids, minerals) to amplify cellular ATP production, enhance detoxification, and accelerate recovery.

Together, they create a powerful synergy for combating chronic fatigue, supporting athletic performance, and promoting longevity, expect sustained all-day energy, sharper mental focus, and faster bounce-back from physical or mental stress.

LET'S TALK SIDE EFFECTS

NAD+ therapy via subcutaneous injection is generally well-tolerated. Some clients may experience mild injection site redness or slight tingling, which resolves within hours. Unlike IV NAD+ (which can cause temporary flushing or nausea), the prefilled cartridge method provides a gentler, more comfortable experience. Rare: temporary fatigue as cells adapt to increased energy production in the first few doses.
