SEMAX INFORMATION DOCUMENT

WHAT IS SEMAX, ANYWAY?

Semax is a 7-amino-acid peptide derived from a fragment of ACTH (4-10), modified for stability and a longer effect. It has no hormone or cortisone activity. It is used for focus, memory and mental energy, and for fatigue, stress and low mood. It increases BDNF, the brain's own growth and repair factor, and supports healthy blood flow to the brain. Each prefilled pen holds 5mg: 20 morning doses, a 4-week course.

INTRODUCING SEMAX AT mobivive

Sharpen your focus and lift mental energy with Semax, the cognitive peptide that boosts the brain's own growth factor, without stimulants. Doctor prescribed, delivered to your door.

THE SCIENCE

Semax upregulates BDNF (brain-derived neurotrophic factor) and its receptor TrkB, which support learning, memory and the survival of nerve cells. It increases dopamine and serotonin activity, improves cerebral blood flow and has antioxidant and anti-inflammatory effects on brain tissue. It is used in neurorehabilitation after stroke and has been studied for memory and concentration in cognitive impairment.

THE SEMAX PROCESS AT mobivive

1. **Complete your medical questionnaire**

Fill in the questionnaire. If you answer **"No" to all questions**, your **Semax order is placed**.

If you answer **"Yes" to any question**, a **once-off consultation (R500)** is required.

2. **Order and delivery**

Your Semax arrives as a **prefilled cartridge pen**, no vials, no mixing.

3. **Morning injection routine**

Self-administer every morning, 5 days on and 2 days off: remove cap, dial your prescribed dose (250µg), clean the injection site, and inject subcutaneously at a 45-90° angle into your lower abdomen (at least 5cm from the navel), front of thigh or upper arm. Rotate sites each time.

KEY REMINDERS

- Inject in the morning; it is non-sedating
